

## Telecom Case Study

# Compliance and Real time subscriber verification

### Client Pain

- Inconsistent credit decisioning and slow turnaround time (TAT). High turnaround time for reporting to the regulatory authority.
- No consistent view of customers.
- Huge subscriber database running into couple of hundred million records.
- Identifying bulk connections of the customers on a monthly basis is a gigantic task.
- Very High computing resources.
- Lot of manpower for manual verification of matches.

How Posidex is helping India's largest Telecom Company cut down on huge fines levied by regulatory authority Telecom Enforcement and Resource Management (TERM).

The Telecom Enforcement and Resource Management (TERM) levies heavy penalties incase the telecom regulator finds out from its process of any discrepancy in the number of connections belonging to any particular customer.

### The Posidex Edge

- **Pro-active Compliance**  
Proactive steps to continuously meet with TERMS observations, and fine tune the matching process.
- **Real time**  
Real-time subscriber verification capability integrated seamlessly as part of the work flow.
- **Efficiency**  
Average 10 to 20x improvement in the processing speeds. Flexibility: Policy driven configuration, substantial improvement in process, Power of IT in the hands of business users.
- **Speed and Accuracy**  
Minimal false matches and computing at near instant speed. Fast Turn around time.
- **Top line and Bottom line impact**  
Increased Return on Investment (ROI) with impact across verticals – Risk, Operations, Sales, Marketing, Compliance and analytics.
